Regional Data for Global Action: How to Shape the Future of Renewables

Day: September 11th 2017

Time: 15.00 – 16.30

Room: HUICHOL

Description:

Good decisions require up-to-date information. Decision makers also need to understand the evolution of the renewable energy sector in the context of the overall energy transition. Within this context it is important that regional developments are understood. While there may be agreement that we need to decarbonise our energy system there is no one way to achieve this; what works in one country does not necessarily work in another.

This side event will present where we currently stand with regards to renewable energy deployment and outline expert views from around the world about the opportunities and challenges of a 100% renewable energy future. Presentation from REN21's Latin American & Caribbean Network coordinator will demonstrate the relevance of regional renewable energy data to advance global renewable energy deployment. How experts can engage in the data collection process will also be illustrated.

Speakers:

Christine Lins, REN21

Rana Adib / Hannah E. Murdock, REN21

Gonzalo Bravo, Lead Regional Contributor LAC, REN21 / Fundación Bariloche

Walter Vergara, WRI
