Accessing the Questionnaire

Step 4: In the **Renewables in Cities Global Status Report** group, access the **Renewables in Cities Global Status Report** Questionnaire.

Renewables in Cities Global Status Report (REC-GSR)

REN21 Renewables in Cities Global Status Report

As the global multi-stakeholder network for renewable energy, REN21 has been tracking global renewable energy developments since 2005. This has occurred primarily through our *Renewables Global Status Report*, the main reference document for the renewables industry. Given the important role that cities play in the energy transition, REN21 is currently producing the first edition of a new report series, the *Renewables in Cities Global Status Report*. This publication aims to map out the current status and recent developments of renewable energy in cities and towns, of policies advancing renewable energy uptake to demonstrate the role that these jurisdictions can and do play in advancing the energy transition.

As this is a collaborative effort, REN21 invites a variety of stakeholders to submit information. Whether you are a city-level stakeholder, city expert, or come from industry, NGO, science or academia, if you have information on renewables in cities to share, we invite you to fill in this questionnaire. Thank you for supporting us in shaping this tool to advance the transition to renewable energy in cities!

Many thanks for your participation, which is critical for the production of another balanced, comprehensive and high quality *Renewables in Cities Global Status Report*. All contributors and reviewers will be acknowledged in the final report.

To access the questionnaire, follow the link below. Deadline is the 25th February 2019.

If you have any questions or requests, please email us at re_cities@ren21.net
