10 év alatt sem bírt csökkenni a  
globálisan felhasznált fosszilis  
üzemanyagok aránya

MTH Ajánlatok

2019-ben ugyanannyit használtunk belőlük, mint 2009-ben.

Ugyanolyan magas a fosszilis üzemanyagok használatának világszintű aránya, mint egy évtizede - derült ki a zöld beruházásokat ösztönző REN21 nemzetközi hálózat kedden bemutatott jelentéséből.

A jelentés szerint a globális energiaigény, a fogyasztás növekedése közepette a fosszilis üzemanyagokat előállító új telepekbe való befektetések, a biomasszából származó energia csekélyebb használata hozzájárul ahhoz, hogy a fosszilis üzemanyagok alkalmazása továbbra is nagy mértékű maradjon.
